ON

ON

De	tect	ion	area

Detection area can be reduced by selecting the combination on the DIP switches to fit precisely each application .

Daylight threshold*

Tthe sensor can be set to only allow the lamp to illuminate below a defined ambient brightness threshold. When set to Disable mode, the daylight sensor will switch on the lamp when motion is detected regardless of ambient light level. Important: The dip switch no. 8 is on "on". 100lux, 50lux, 35lux: twilight operation, 10lux, 2lux: darkness operation only. Note that daylight sensor is active only when lamp totally switches off.

Stand-by period

Refers to the time period the lamp remains at a low light level before it completely switches off in the long absence of people. When set to Disable mode, the low light is maintained until motion is detected.

Stand-by dimming level

The low light level you would like to have after the hold time in the long absence of people.

IP44

RF Channel Selection

RF wireless net working, up to 16 different groups, set exact same configuration in each driver the can communicate with each other.

Important: The dip switch no. 8 is on "on". *Daylight threshold and Night/light function is set via the same 4 dip switches, and cannot operate simultaneously.

Output Current/Voltage

Night light sensor function*

When ambient brightness is over close lux level, load will be

switched off automatically even if motion detected; When ambient brightness is

below open lux level, load will be switched on even if no motion detected.

Multi-output current from 300mA to 700mA. Output current 300mA/350mA/450mA/600mA/700mA selectable by dip switches.

Hold time

Refers to the time period the lamp remains at 100% illumination after no motion detected.
